PROFESSIONAL SUMMARY

Data Scientist with 2.5 years of professional experience creating ML algorithms and statistical models that help lower costs, simplify complexities, and reveal business intelligence from big data - resulting in a savings of 25% on client cloud computing costs, 40% on report creation, and 30% on incident resolution time. Presently pursuing MSc in Data Science from University of Aberdeen (June 2026), supported by five credentials, including Microsoft Certified: Azure Data Scientist Associate & Microsoft Certified: Azure AI Engineer Associate.

TECHNICAL SKILLS

Python, SQL, Machine Learning, Statistical Modelling, Predictive Modelling, Regression, Clustering, Anomaly Detection, Bayesian Networks, Feature Engineering, Exploratory Data Analysis, Scikit-learn, XGBoost, TensorFlow, Pandas, NumPy, Matplotlib, ETL Pipeline Development, Azure, AWS, GCP, Git, Version Control

EDUCATION

MSc Data Science | University of Aberdeen, UK | Jan 2025 - Jun 2026 (Expected)

Bachelor of Technology | Dr. A.P.J. Abdul Kalam Technical University | Aug 2017 - Sep 2021

EXPERIENCE

Data Engineer I

07/2022 - 12/2024

CloudEQ Software India Pvt. Ltd.

- Designed a machine learning-based resource clustering algorithm in Python utilizing Scikit-learn, TensorFlow, and DBSCAN to detect utilization patterns for 500+ cloud resources, thereby uncovering cost-saving patterns that led to a decrease in the cloud spend of the client by 25%.
- Created automated ETL flows using Python and SQL for the collection, cleaning, and transformation of massive infrastructural telemetry data obtained from the AWS, Azure, and GCP API endpoints into a structured form, saving up to 40% time on data preparation for statistical analysis.
- Created an anomaly detection system using Python that would apply threshold-based statistical models to live metrics data of 500+ monitored infrastructural elements, allowing us to detect performance degradation trends and decrease incident response time by 30%.
- Used feature engineering and clustering algorithms in Python for multi-source cloud utilization data to create clusters of similar infrastructures, providing structured analytics data for further analysis of our infrastructure needs.
- Implemented scalable data pipelines for ingestion of structured data using Microsoft Fabric Data Factory technology.

PROJECT HIGHLIGHTS

- Designed an expert-elicited Bayesian Network (10 nodes, 12 edges, hand-crafted DAG) to generate 200,000 synthetic music upload records modelling legitimate and fraudulent behavior, in collaboration with XYNQ for their ORIGIN fraud detection platform - embedding documented real-world fraud signals including audio hash reuse (4.6x), IP rotation (40%), and temporal bursting, grounded in published fraud cases including a federal prosecution involving \$10M in misappropriated royalties. Validated outputs using three correlation metrics (Spearman ρ , Cramér's V with Bergsma's bias correction, correlation ratio η), achieving mean absolute deviation ≤ 0.01 across all key variables and statistically significant class separation confirming dataset suitability for downstream fraud classifier training.
- Developed an E-sports Match Winner Predictor using XGBoost on 50K+ League of Legends matches, achieving 94.6% accuracy and 0.986 ROC-AUC through structured feature engineering on first-15-minute in-game telemetry data.

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate | Microsoft Certified: Azure Data Scientist Associate |
AWS Certified DevOps Engineer - Professional | AWS Certified Developer - Associate |
AWS Certified Cloud Practitioner | Full Stack Python Diploma - FirstBit Solutions
