PROFESSIONAL SUMMARY

Data Scientist having 2.5 years of industry experience working on ML systems and statistics that help in minimizing cost, streamlining complexities, and extracting business intelligence from large data sets resulting in 25% savings on cloud costs for clients, 40% reduction in manual reporting, and 30% reduction in response times to incidents. MSc in Data Science from the University of Aberdeen (June 2026, Commendation). Five certifications including Certified Azure Data Scientist Associate and Certified Azure AI Engineer Associate.

TECHNICAL SKILLS

Python, SQL, Machine Learning, Statistical Modelling, Predictive Modelling, Regression, Clustering, Anomaly Detection, Bayesian Networks, Feature Engineering, Exploratory Data Analysis, Scikit-learn, XGBoost, TensorFlow, Pandas, NumPy, Matplotlib, ETL Pipeline Development, Azure, AWS, GCP, Git, Version Control

EDUCATION

MSc Data Science | University of Aberdeen, UK | Jan 2025 - Jun 2026

Bachelor of Technology | Dr. A.P.J. Abdul Kalam Technical University | Aug 2017 - Sep 2021

EXPERIENCE

Data Engineer I

07/2022 - 12/2024

CloudEQ Software India Pvt. Ltd.

- Designed and implemented a machine learning-based resource clustering model using Python, Scikit-learn, tensorflow, and DBSCAN for identifying utilization patterns among more than 500 cloud resources, helping in identifying opportunities for cutting costs through which helped in reducing cloud expenses for the client by 25%.
- Implemented automated ETL pipelines using Python and SQL for gathering, cleaning, and transformation of high-volume telemetry data from AWS, Azure, and GCP apis to build structured data sets for analysis purposes, thereby reducing manual efforts in data preparation by 40%.
- Built a Python-based system for anomaly detection using statistical thresholding of real-time metric values collected from 500+ monitored assets to enable early detection of degrading performance patterns and reducing the response time to such incidents by 30%.
- Performed feature engineering and unsupervised clustering of multi-source cloud utilization data for segmentation of resource behavior, leading to structured analysis data output.
- Worked on designing and implementing scalable data pipelines in Microsoft Fabric Data Factory to automate structured data ingestion workflows.

PROJECT HIGHLIGHTS

- Created an expert-sourced Bayesian Network (10 nodes, 12 edges, manually-built DAG) to produce 200,000 synthetic music uploads across a 20-column schema, simulating legitimate and fake behavior patterns in four scenarios - streaming bots, artist impersonation, content plagiarism, and metadata stuffing - working together with XYNQ to build 200,000 samples for their ORIGIN fraud detection system. Utilized a scalable and configuration-driven architecture (DatasetConfig dataclass) with deterministic, dictionary-less phoneme-based text synthesis (VocabularyFactory) for consistent artist names and track titles creation. Integrated a set of real-world fraud indicators, such as audio hash collisions (4.6x), IP masking (40%), and time bursts, based on documented cases of fraud, including a federal investigation of fraud with \$10M worth of misappropriated royalties. Ensured the quality of generated data using three correlation metrics (Spearman ρ , Cramér's V with Bergsma's correction, correlation ratio η), getting mean absolute deviation ≤ 0.01 across all key features and statistically significant class separation as a proof of dataset usability for further training of a fraud classifier.
- Built an E-sports Match Winner Predictor via applying XGBoost on 50,000+ League of Legends matches, obtaining 94.6% accuracy and 0.986 ROC-AUC by means of feature engineering on 15 minutes of telemetry data from each match.

CERTIFICATIONS

Microsoft Certified: Azure AI Engineer Associate | Microsoft Certified: Azure Data Scientist Associate |
AWS Certified DevOps Engineer - Professional | AWS Certified Developer - Associate |
AWS Certified Cloud Practitioner | Full Stack Python Diploma - FirstBit Solutions
